Trevor Baylis: Inventor whose wind-up radio helped remote parts of Africa tune in to education

One evening in the autumn of 1991, Trevor Baylis sat at home, watching a documentary about the spread of Aids in Africa. Upon learning that one of the greatest obstacles to halting the epidemic was extending health education to poor and remote communities in African countries, he set about developing a radio that would require neither access to an electrical grid nor even to batteries, which were expensive. His invention, a radio that could be powered by muscle alone, changed the lives of millions, making it easier than ever before to catch airwaves and all the treasures they carry.

KNOWLEDGE CAPTURING

The process of converting the knowledge or experience that resides in the mind of an individual into an explicit representation, whether an print electronic, or multimedia form

KNOWLEDGE MANAGEMENT

A discipline that promotes an integrated approach to identifying, capturing, evaluating, retrieving, and sharing all of an enterprise's knowledge assets. As defined by the Gartner Group (Duhon 1998), these assets include databases, documents, policies, procedures, and previously uncaptured expertise and experience of individual workers. Knowledge management efforts overlap with organisational learning but may be distinguished from that by a greater focus on knowledge as a strategic asset and on encouraging the sharing of knowledge. It is an enabler of organisational learning

KNOWLEDGE SHARING

A subset of knowledge management encompassing the exchange of knowledge (information, skills, experiences, or expertise) within and across organisations. Although it can be one-directional, knowledge sharing in most cases is a two-way or multilateral exchange in which the parties learn from each other. Knowledge sharing is more than mere communication, because much knowledge in organisations is hard to articulate. In development work, some knowledge sharing has a regional aspect. For example, South-South knowledge sharing refers to exchanges among partners and peers across developing countries
